* Growth rates are calculated as the difference between penetration rates or proportions in different time intervals

** The huge increase in the number of "mobile subscriptions" is due to the revision of this indicator definition by the International Telecommunications Union (ITU). Then starting from January 2012, all the three NMOs follow the new definition which state that the mobile subscriptions are the subscriber who used the service at least once during the last three months for making or receiving calls or carrying out a non voice activity such as sending or receiving SMS or accessing the internet. For more information check the "Handbook for the Collection of Administrative Data on Telecommunications/ICT" issued by ITU 2011.
